ABOUT ME

I am a passionate and driven undergraduate student specializing in Information Technology, with strong hands-on experience in full-stack web development using the MERN stack (MongoDB, Express.js, React.js, Node.js). I have a solid foundation in **Java, JavaScript (ES6+), React.js, Tailwind CSS, and Node.js**, along with practical exposure to MySQL and Git-based workflows. I enjoy building responsive, user-focused applications with clean code and scalable architecture.

I am eager to join high-impact engineering teams where I can learn, grow, and contribute to real-world challenges in a fast-paced SaaS environment.

EDUCATION

SLIIT
BSc. (Hons) Information Technology
2023 – 2027 Undergraduate Student

Central College Kebithigollawa
Passed G. C. E A/L (Technology Stream)

PROJECTS

Medi Track – Pharmacy Management System

Medi Track is a full-featured web-based Pharmacy Management System built using the MERN stack. It is designed to automate and simplify key pharmacy operations such as inventory control, order management, delivery tracking, prescription handling, and customer inquiries. With a focus on real-time stock monitoring and smart features like geolocation and AI-based replies, Medi Track empowers pharmacies to improve efficiency, ensure medicine availability, and enhance customer satisfaction. Built using Agile methodologies, the system supports scalable deployment and continuous integration for rapid feature delivery and errorfree updates.

GitHub repository link : https://github.com/Hirunikathaluwage/MediTrack

Technology Used: React with Vite, Node.js with Express, JavaScript, CSS, MongoDB, Smart Chatbot, RESTful APIs

Land Management System – Property Management Web Application

The Land Management System is a comprehensive web-based platform designed to manage land property listings, seller information, and administrative workflows. Built with Java, JSP, and MySQL, it allows admins to perform full CRUD operations on land data, manage users, and view listings through an intuitive, responsive UI. The system follows the MVC architecture and integrates Servlets and the DAO pattern for clean separation of concerns and maintainable code. Designed with Bootstrap, the interface ensures a mobile-friendly, user-friendly experience while providing dynamic functionality. The system is ideal for organizations or individuals handling property advertisements and transactions.

Technology Used: HTML, CSS, JavaScript, JSP, Java Servlets, Java, MySQL, Apache Tomcat 9

Movie App

The Movie Explorer App is a cross-platform mobile application built with **React Native (Expo)** and **TypeScript**. It fetches and ranks movies in real time using a custom popularity algorithm based on user engagement. The app features a responsive UI styled with **Tailwind CSS** through **Native Wind**, and uses **Appwrite** for backend services, including data fetching and API integration. Designed with modern UI/UX principles, the app ensures a smooth and scalable experience across both Android and iOS devices.

GitHub repository link : https://github.com/Awantha2003/Movie_App

Technology Used : React Native, TypeScript, Tailwind CSS, NativeWind, Appwrite, RESTful APIs

KCS Overseas Website – International E-Commerce Platform (Client Project)

KCS Overseas is my **international client project**, a professionally built **e-commerce platform** developed for an overseas **(Indian)** client specializing in imported snacks, chocolates, and beverages. The platform focuses on **brand-driven UI/UX**, seamless product browsing, and conversion-optimized design. It includes structured product categories, SEO-optimized product pages, responsive layouts, and custom visual sections such as hero banners, login visuals, and promotional listings. The project emphasizes **real-world client requirement analysis**, theme customization, and scalable content management to support business growth and online sales operations.

Live link : https://kcs-overseas.myshopify.com

Technology Used : Shopify, Liquid Templates, HTML, CSS,PHP, SEO Optimization, UI/UX Design

Nature Pulse Website – Healthcare & Wellness Platform *(First Client Project)*

Nature Pulse is my **first full client project**, a web-based healthcare and wellness platform that connects **patients, doctors, and administrators**. It features secure user management, appointment booking, daily health tracking, Ayurvedic product shopping, and a community-driven **Evolving Diagnosis Report Community (EDRC)** for shared recovery stories. With **role-based access control**, **secure authentication**, and **futuristic dashboards** for patients, doctors, and admins, the system ensures a seamless and trusted healthcare experience. The platform also integrates **payment gateways, analytics, and content moderation** for scalability and real-world usability.

GitHub repository link : https://github.com/Awantha2003/Nature_Pulse.git

Technology Used : React.js, Node.js with Express, MongoDB

Skills

Backend Development: NodeJS, Python, Java, Kotlin

Frontend Development: ReactJS, HTML, CSS **,** Bootstrap, Tailwind CSS

Tools: GitHub, MongoDB, VS Code, Trello, Android Studio

Soft Skills: Problem Solving, Communication skills, Team Collaboration, Self Learning

CERTIFICATES

Machine Learning Operations (MLOps) for Generative AI
